Verbatim has led the industry in high-quality DVD media since the beginning of DVD recording. Preferred by DVD drive manufacturers, Verbatim DataLifePlus DVD media continues to set the standard for high-speed disc performance, reliability, and compatibility.

DataLifePlus DVD+R and DVD-R discs incorporate Verbatim's proprietary Metal Azo recording dye technology, fine-tuned to produce exceptional results at the highest write speeds, whilst maintaining compatibility with lower speed recording devices and assuring long archival lifetimes for important data. DataLifePlus DVD+RW and DVD-RW discs are manufactured utilising a patented phase-change recording layer, Super Eutectic Recording Layer (SERL), which minimises noise during write/rewrite cycles and provides superior archival stability.

In addition to Verbatim's ongoing DVD technology leadership, Verbatim offers the industry's most complete line of DVD media; all formats in a wide variety of packaging options for personal and professional use. DataLifePlus DVD+R/-R discs are available with inkjet and thermal printable coatings developed to produce incredible disc surface images from printer manufacturers such as Primera, Epson, Rimage, and others. Verbatim also developed DigitalMovie DVD with an innovative movie reel disc design that adds a unique touch to home movies, marketing presentations, and other DVD content.

Leadership, innovation, quality, compatibility, variety, Lifetime Warranty. All words synonymous with Verbatim DataLifePlus DVD.

	FORMAT	APPLICATIONS	READ COMPATIBILITY	WRITE COMPATIBILITY
 DVD-R	4.7GB/9.4GB (120min. Video) Write -once media	One-time video recording and data archiving	Vast majority of DVD video players and DVD-ROM drives	DVD drives and video recorders from Pioneer, Apple, Sony, Panasonic and other leading manufacturers
 DVD-RW	4.7GB (120min. Video) Re-recordable media	Video recording and streaming PC backup	Majority of DVD video players and DVD-ROM drives	DVD drives and video recorders from Pioneer, Sony, other leading manufacturers

DOUBLE LAYER DVD MEDIA

Double Layer DVD media uses technology developed jointly by Verbatim and Philips. Both companies view the development and introduction of Double Layer technology as the next important milestones in the drive to continually improve and expand the optical data storage options available to consumers. The new 2.4x DVD+R media nearly doubles the storage capacity on DVD recordable discs from 4.7GB to 8.5GB on a single side while maintaining compatibility with existing DVD video players and DVD-ROM drives. With Verbatim's new DVD+R DL discs, consumers will be able to record up to four hours of DVD-quality video or up to 16 hours of VHS video quality on a single disc.

LIGHTSCRIBE DVD MEDIA

LightScribe Direct Disc Labeling is a new technology that offers consumers and businesses a simple, no-hassle way to burn professional, silkscreen-quality images direct to the surface of their DVDs. Using the same laser that burns data in their disc drives, customers burn their data as always, flip the disc over, reinsert it into the drive and burn a precise and permanent iridescent image directly to the discs surface. This technology requires a LightScribe enabled drive and media.
