DVD-R Dual Layer

Dual Layer DVD media uses technology developed jointly by Verbatim and Philips. Both companies view the development and introduction of Dual Layer technology as the next important milestone in the drive to continually improve and expand the optical data storage options available to consumers. Verbatim's DVD-R Dual Layer media nearly doubles the storage capacity on DVD recordable discs from 4.7GB to 8.5GB on a single side while maintaining compatibility with existing DVD video players and DVD-ROM drives. With Verbatim's new DVD-R DL discs, consumers will be able to record up to four hours of DVD-quality video or up to 16 hours of VHS video quality on a single disc.

DVD-R LightScribe

LightScribe Direct Disc Labeling is a technology that offers consumers and businesses a simple, no-hassle way to burn professional, silkscreen-quality images direct to the surface of their DVDs. Using the same laser that burns data in their disc drives, customers burn their data as always, flip the disc over, reinsert it into the drive and burn a precise and permanent iridescent image directly to the discs surface. This technology requires a LightScribe enabled drive and media.

Why Choose Verbatim?

Reliable Media for Every Occassion

If you're looking for the fastest speeds, highest capacities and unique options in DVD media, look to Verbatim- the industry pioneer.

Perfect for DVD content distribution and archiving, Verbatim 16x DVD-R are the fastest write-once DVD media available. Need extra capacity? Verbatim's DVD-R Dual Layer media stores up to 8.5GB or 4 hours of DVD video. If you need DVDs for your camcorder, consider Verbatim's Mini DVDs (8cm), available in single and double layer formats. Unique products like Digital Movie, LightScribe and HardCoat protection, which protects discs from scratches, complete the industry's most full-featured roster of DVD media.

For speed, capacity, and the latest advancements in optical technology, Verbatim has the vision to lead the way.
