\*As used for storage capacity, one gigabyte (GB) = one billion bytes and one terabyte (TB) = one trillion bytes. Total accessible capacity varies depending on operating environment.

\*\*Based on read speed and internal testing. As used for transfer rate, megabyte per second (MB/s) = one million bytes per second. Performance will vary depending on your hardware and software components and configurations.

\*\*\*IOPS = input/output operations per second. Performance will vary depending on your hardware and software components and configurations.

<sup>1</sup> TBW (terabytes written) values calculated using JEDEC client workload (JESD219) and vary by product capacity.

<sup>2</sup> Operational temperature is measured by an on board temperature sensor. Non-operational storage temperature does not guarantee data retention.
